

## Zamperini Loses Sugar Bowl Race to San Romani

Meager reports of New Orleans' Sugar Bowl where Louis Zamperini opened his mid-winter track campaign as an unattached distance runner last Sunday, indicated that the Torrance Olympian encountered some difficulties in the 1,500-meter race.

This event was won by Archie San Romani, holder of the world's record in the 2,000-meter run, in the slow time of 4:02. Glenn Cunningham, who held the lead from the start until the last 200 yards, was passed by San Romani and placed second. Zamperini and Chuck Fenske, were up in front for a time but faded in the stretch and their positions were not reported in press dispatches from New Orleans.

In a letter to his parents, Mr. and Mrs. Anthony Zamperini of Torrance, Louis reported a day or two before the Sugar Bowl meet that his shoulders were cramping during work-outs. He is expected back in the Southland shortly for a short stay and then will leave for New York City and a series of indoor meets.

## And Fry Till Golden Brown

By Katharine Fisher

Director, Good Housekeeping Institute

Do you remember hanging around the kitchen stove when you were a child, watching the doughnuts turn to delicious golden circles in the bubbling fat? Do you remember begging to have the "holes" fried for you? How good those doughnuts smelled and tasted! Our Testing Staff here at the Institute seem still to be children, for when the first fragrance of doughnuts begins to float out of one of our kitchens, they are at hand in full force. Indeed, all fried foods are popular as they emerge crisp and golden brown from the kettle of hot fat.

But there are a few secrets—very simple ones—in the making of wholesome, toothsome fried foods. First of all, be sure you use a fat that does not smoke at the right frying temperature, which is quite high—from 375° F. to 385° F. Then, don't guess at this temperature. Use an approved fat thermometer to determine it, as it is most important to have the fat hot enough—but not hot enough to burn—for if the fat is not hot enough, you may have fat-soaked, indigestible food. Fried foods are wholesome if properly fried. Finally, strain the fat after each frying and store in a covered container; then you can use the same fat again and again.

When these few secrets are learned, you will find that you have delicious new ways of preparing fish, meat, vegetables, and fruit. Here are some favorite recipes tested in our Institute kitchens. Won't you try them and taste for yourself their delicious crunchiness?
